Horizontal Directional Drilling

As part of our effort to be a complete trenchless solution company, we have expanded our operations to include horizontal directional drilling. Triad's HDD manager and staff have more than 15 years experience.

Our capabilities include sizes up to, and including, 24" diameter piping. In our first year, we have installed fiber optics, sewers, force mains and water mains. Our current capabilities serve the southeast region of the U.S., including Virginia, North Carolina, South Carolina, Georgia and northern Florida. For special projects, we can mobilize to almost any region in the eastern U.S.

HDD is the new area where Triad combines its technical knowledge with exceptional customer service for the communications and utility owner.
