Road Boring

Triad Engineering can bore and install pipes and casings ranging from 1" to 48" in diameter by various methods. Triad owns pneumatic moles, pipe rammers and auger boring machines to get the job done right. Our method of installation depends on the ground conditions and requirements.

In larger diameter crossings that require steering at the bore face, we use small tunnel boring equipment that is designed to allow jacked liners behind the tunnel machine. All of these tools allow Triad to bridge the new demands of trenchless technology and tunneling.
